

“Great Vision Without Great People Is Irrelevant”

Position: Patent Attorney

Experience: 0-2 Years

Job Location: Goa/Kochi

Our Company Vision

Our Company Vision is to nurture the best resources and to be globally recognised as an exclusive brand of choice for both Internal and External Stakeholders. We facilitate innovative holistic services with Respect and Virtue.

Introduction: Source It Out

Source IT Out (SIO) is a fast-growing technology-based Global Outsourcing Company with a large base of international clients. The Company is headquartered in the capital city of Goa in Panaji, having a branch office in Kochi. We offer a vast range of services from highly technical expertise to essential services like finance, operations, marketing & customer support solutions. Source It Out is a Knowledge Process Outsourcing Company (KPO) helping SME's increase their profit margins by outsourcing knowledge-based tasks and objectives. There are many benefits in working with SIO apart from our U.K clientele.

We are thrilled and excited to offer this opportunity to the best candidate and place heavy emphasis on recruiting the right candidate for the job role. SIO is ONLY looking for highly driven candidates who wish to be challenged and be recognised for their ability.

If you are the kind of individual with unrecognised talent and hunger who will be willing to learn and push the envelope, SIO is the right Company for you. If you wish to challenge, grow, develop and truly be a part of an incredible journey, then please come and meet us, say hello and see how we can work together.

Job Description

As a Patent Attorney you would be working for an architecture and design studio that focuses on innovation and prudent works. This studio is the only company that can design emission-free, carbon positive buildings from a temporary shelter for the homeless to each and every city, having designed and registered successful patents in various industries. The studio works seamlessly to bring up innovative, sustainable, and eco-friendly ideas to make the world a better place to live in.

Principal Duties and Responsibilities

We are hiring a 'Patent Attorney' to file, keep records, and related works of the patent. The primary job responsibility of the 'Patent Attorney' will be to take follow-ups on the previous patents filed, make necessary development to file the new patent, and to keep the records of everything legal related to the patent. In addition to that, the candidate must have the skills to analyze electrical systems and applications.

This Candidate must have skills to plan and schedule own work activities, coordinate activities with other cross-functional team members to meet project goals. Candidate having experience in the following will be preferred: a) Patent Filing b) Legal & c) Follow-ups

The core duties will include:

- Discuss inventions and processes with inventors or manufacturers and ascertain whether they are likely to succeed in being granted patents
- Analyze scientific or technical documents, including previously granted patents, to assess whether an invention is new and innovative
- Write detailed technical descriptions of inventions in precise legal terms (patent drafts)
 - Suggest modifications or extensions to the definition of the invention apply for patents from the Intellectual Property Office (IPO) and the European Patent Office (EPO)
- Prepare responses to report from the patent examiners
- Ensure application and renewal deadlines are met
- Work with solicitors and barristers to defend or enforce UK patents
 - Advise overseas attorneys on applications for foreign patent applications
- Instruct on whether business activities will infringe someone else's patent rights
- Deal with assignments of the patent when a patent is sold or transferred
- Keep up to date with legal developments in the intellectual property field
- Advise on other intellectual property rights, e.g. designs or trademarks
- Cross communication with the team members related to design
- Preparing analysis report for a better flow of information.
- Evaluating electrical systems, products, components, and applications by designing and conducting research programs; applying knowledge of electricity and materials.
- Confirming systems and components' capabilities by designing testing methods; testing properties.
- Developing electrical products by studying customer requirements; researching and testing manufacturing and assembly methods and materials.
- Developing manufacturing processes by designing and modifying equipment for building and assembling electrical components; soliciting observations from operators.
- Assuring product quality by designing electrical testing methods; testing finished products and system capabilities.
- Preparing product reports by collecting, analyzing, and summarizing information and trends.
- Keeping equipment operational by following the manufacturer's instructions and established procedures; requesting repair service.
- Ensuring compliance with specifications, codes, or customer requirements by directing or coordinating installation, manufacturing, construction, maintenance, documentation, support, or testing activities.

- Performing detailed calculations to establish standards and specifications.
- Maintaining product database by writing computer programs; entering data.
- Estimating material, labor, or construction costs for budget preparation
- Working with a variety of technicians.
- Completing projects by training and guiding technicians.
- Contributing to team effort by accomplishing related results as needed.
